W06-P2: Supabase settings in Node.js, can connect to Supabase to get 9 blogs data

=> able to get 9 blogs data in Supabase

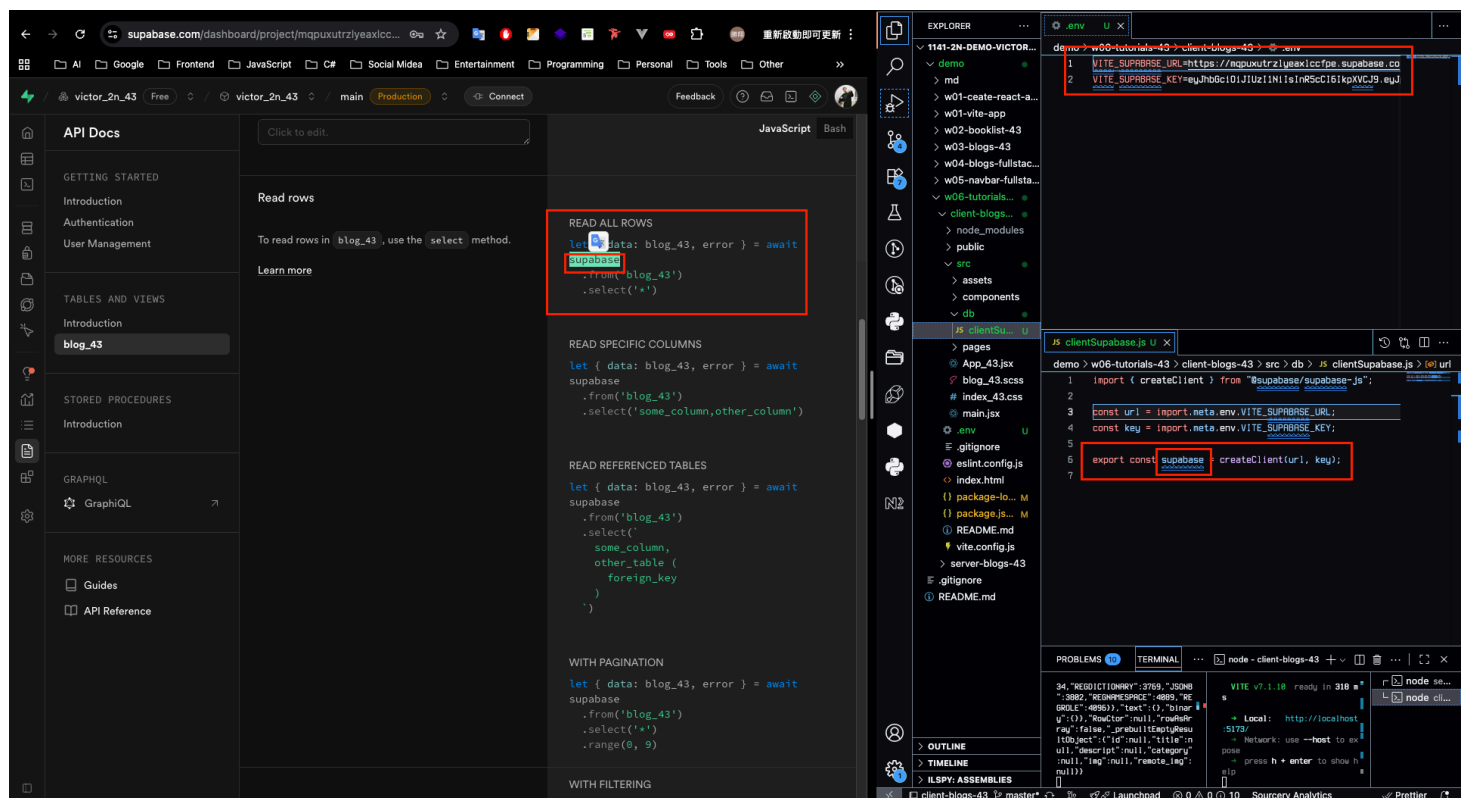

=> connect parameters in Supabase

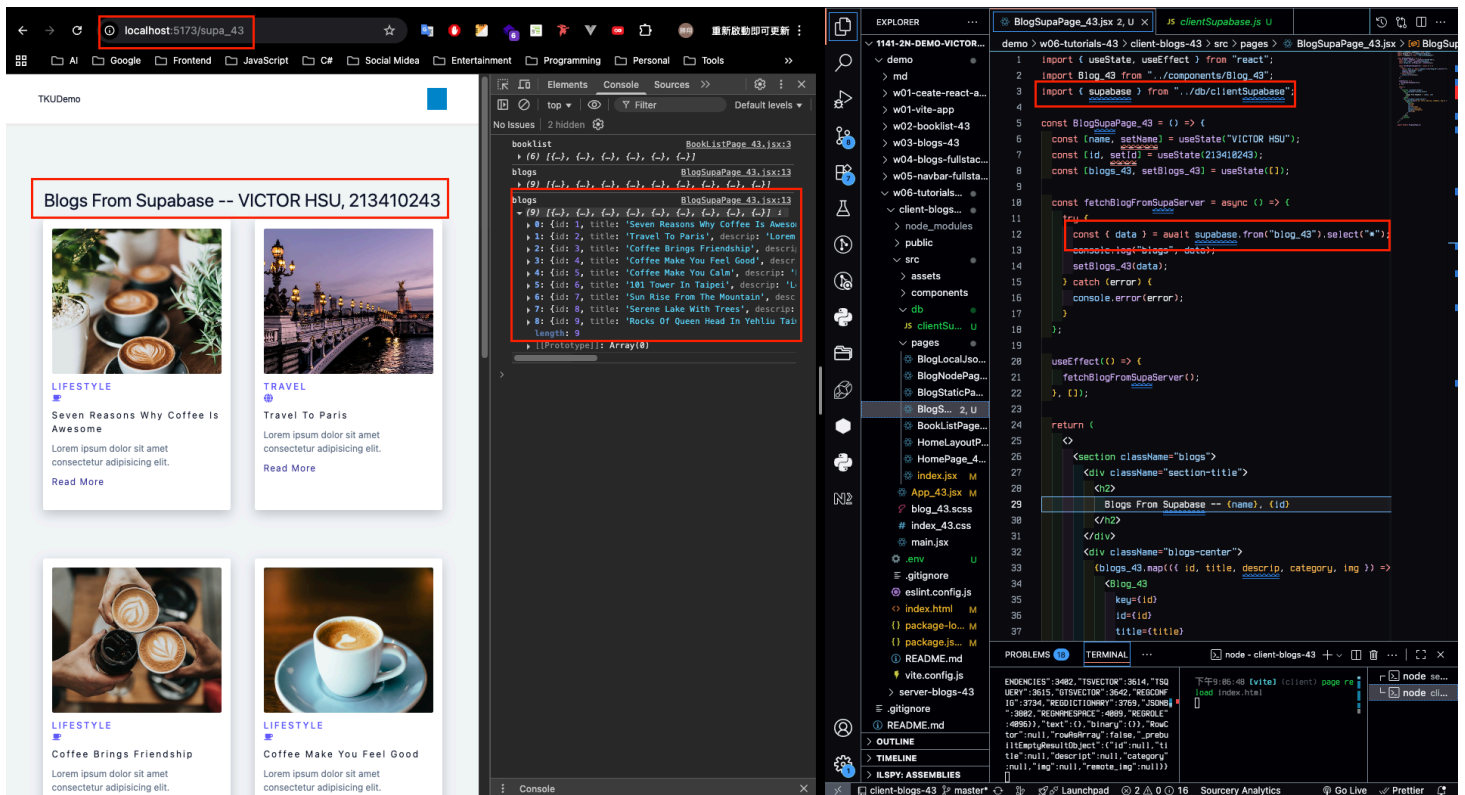

The screenshot shows a Visual Studio Code editor with a project named 'w06-tutorials-43'. The Explorer sidebar on the left shows the file structure, including 'package.json', 'server.js', and 'README.md'. The main editor window displays the 'server.js' file, which contains a database connection configuration. A red box highlights the configuration for the 'pool' object, including the host, user, password, database, and port. The 'package.json' file is also visible, showing dependencies like 'pg' and 'pg-hstore'. The Run and Debug console at the bottom shows the output of the command 'node server.js', indicating a successful connection to the database.
